OBJECTIVE

Data Science-focused Computer Science undergraduate skilled in Python, SQL, Machine Learning, Data Analytics, and Statistics. Experienced in predictive modeling, recommendation systems, and building data-driven solutions. Familiar with full-stack web technologies for deploying scalable applications. Seeking a Data Science or Machine Learning role to solve real-world business problems using data.

SKILLS

Technical Skills

- Programming Languages: Python, Java, C, Javascript, HTML/CSS
- Web Technologies: React, Node.js, Express.js
- Database Systems: MongoDB, MySQL
- Data Science & Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
- Cloud Technologies: AWS (S3, EC2), Azure
- DevOps & Version Control: Git, GitHub
- Mathematical & Statistical Tools: Linear Algebra, Calculus, Statistics, Probability
- Other Tools & Technologies: Jupyter Notebook, VS code, Excel

PROJECTS

Project 1: AI-Powered E-Commerce Dress Recommendation System

Developed a full-stack AI-driven e-commerce platform with a collaborative filtering-based recommendation system to deliver personalized product suggestions. Analyzed user behavior using Python, Pandas, and Scikit-learn on 100+ records, improving recommendation accuracy by 25%. Implemented demand forecasting, dynamic pricing, and inventory optimization to enhance revenue and sales efficiency. Built an interactive analytics dashboard with automated product discovery and real-time insights, improving user engagement and decision-making while integrating machine learning models with a scalable backend.

Tools: Python, Pandas, Scikit-learn, Machine Learning, HTML, CSS, Javascript, Flask, MongoDB

Project 2: MilkyStat – Milk Delivery Management System

Developed an Android-based Milk Delivery Management System with dedicated interfaces for customers and administrators to streamline milk distribution, order management, consumption tracking, and payment processing. Integrated Firebase Authentication and Firebase Realtime Database for secure user authentication and real-time data synchronization, supporting 100+ users and 500+ daily transactions. Implemented features including milk inventory tracking, expiry management, automated billing, and order history, achieving 99% data accuracy while reducing manual effort. Designed a responsive Material Design user interface with XML layouts to provide seamless navigation, real-time updates, and an improved user experience.

Tools: Java, XML, Firebase Authentication, Firebase Realtime Database

Project 3: NotifyFlow - Smart Routine Notification System

Developed a full-stack smart notification system that delivers personalized reminders based on user behavior and real-time activity analysis. Designed an intelligent notification engine using adaptive scheduling algorithms to process 5,000+ user activity logs, optimizing alert timing and increasing daily task completion by 30%. Built an interactive analytics dashboard for real-time productivity monitoring, task management, and performance visualization, enabling data-driven insights and improving user engagement through personalized notification strategies.

Tools: MERN Stack (MongoDB, Express.js, React.js, Node.js)

Link: https://github.com/DharunS-25/NotifyFlow_Application

Project 4: Job Portal – Online Application System

Developed a full-stack job portal application that connects job seekers with employers through a secure recruitment platform. Implemented secure user authentication, profile management, job search, personalized job recommendations, application submission, and real-time application tracking to enhance the user experience. Built an employer dashboard for job posting, candidate filtering, and recruitment analytics, enabling efficient hiring and streamlined recruitment workflows through seamless frontend-backend integration.

Tools: MERN Stack (MongoDB, Express.js, React.js, Node.js)

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science Engineering
Kumaraguru College of Technology
CGPA : 8.00

2023 - present
Coimbatore, Tamilnadu

HACKATHON & ACHIEVEMENTS

Participated in Smart India Hackathon 2025 and Odoo Hackathon Gujarat, contributing to the design and development of innovative solutions for real-world problem statements. Collaborated within a team environment to perform problem analysis, ideation, and rapid prototyping, applying strong analytical thinking and structured problem-solving approaches. Gained hands-on experience in end-to-end product development, including requirement understanding, solution architecture, and implementation under time constraints. Effectively presented project ideas and prototypes to evaluators, enhancing communication, teamwork, and technical presentation skills in a competitive hackathon environment.

INTERNSHIP

Actively seeking a Data Science or Web Technology Internship to apply skills in Python, SQL, Machine Learning, and full-stack development (MERN) to build scalable, data-driven applications. Eager to gain hands-on industry experience, contribute to real-world projects, and deliver measurable business impact.

CERTIFICATES

- Python - GeeksforGeeks
 - Excel – Simplilearn
 - Data Science – IBM
 - Machine Learning Techniques - Coursera
 - Cloud Foundations – AWS Academy Graduate
 - Data Analysis Using Python – Coursera
